Incident Investigation Report

Generated	2026-10-18T17:37:59.267753+01:00
Investigation request	Investigate the db.
Tool calls	3

Timeline

- The last hour shows a mix of request completions with status code 200, indicating the database is receiving and responding to requests.
- Latency metrics for the last hour range from 85.3 ms to 154.2 ms, with an average of 120.8 ms. There is no consistent spike or drop in latency within the last hour.

Root Cause

- No clear signs of an immediate issue from the logs or metrics within the last hour. The database is processing requests and the latency is within the normal range.

Evidence

- Logs show consistent request completions with status 200.
- Latency metrics are within the expected range, with no significant fluctuations.

Recommended Action

- Continue monitoring the database performance and logs. If the issue persists or worsens, further investigation or redeployment might be necessary.
